RAZZO™

techniques

MARBLE

EASILY CREATE A MARBLING EFFECT BY BRUSHING RAZZO INTO YOUR MOLD.

- 1** After mixing a small amount of Part A and Part B, add additional Razzo Acrylic Liquid (Part A) until the mixture is thin enough that it drizzles from your brush.
- 2** This thinned material will create the veins in your marble effect. Brush it onto the walls of your silicone mold and allow it to bead on the surface. This effect works best with molds that have a high-gloss surface.
- 3** Using the standard mix ratio and a new color, fill the mold without disturbing the surface of the mold.
