RAZZO™

techniques

TERRAZZO

CREATE A TERRAZZO EFFECT USING CUSTOM COLOR CHIPS.

- 1 TO CREATE CHIPS:** Spread a thin layer of Razzo material onto a silicone mat or sheet of plastic. Each time you have leftover material from a project, remember to use the excess to spread and make chips, then store for future use. When it's dry, crumble it into chips, which can be large or small based on the effect you want to create.
- 2** Mix up the Razzo you want to use as the base.
- 3** Add chips in various colors and sizes. Pour into mold.
- 4 TO REVEAL CHIPS:** When your project is ready to demold, use 220-400 grit sandpaper to wet sand the surface. Immediately after curing, the material will be softest, making it easier to sand.
